EVAN NARAYA HOKKY PRADYGTA

Automation & Integration Engineer
Magelang, Indonesia (UTC+7) | evannarayahp@gmail.com
linkedin.com/in/evannaraya | github.com/naraya07pedro-spec | evannaraya.netlify.app

SUMMARY

Automation and integration engineer, working in the field since 2026. Builds n8n workflows and API integrations for lead handling and other repetitive operational work, with a focus on validation, duplicate prevention, and recovery when a step fails. Has built AI-assisted systems for two freelance clients and published four public projects.

TECHNICAL SKILLS

Automation: n8n (VPS-hosted), webhooks, REST APIs, Gmail, Google Sheets, workflow QA
Engineering: JavaScript/TypeScript, Python/FastAPI, PostgreSQL/Supabase, Docker, GitHub CI
Reliability: validation, suppression, deduplication, idempotency, retries, recovery, human approval

EXPERIENCE

AI Automation & Integration Engineer (Independent) 2026 – Present
VAREVANT | Remote, Indonesia

- Build and maintain VPS-hosted n8n workflows that check inbound leads, route them, send follow-ups, and handle replies and bounces.
- Added suppression, duplicate-event, and live-state checks to prevent repeated or inappropriate outreach.
- Connected workflows to APIs, webhooks, databases, Gmail, and Google Sheets; diagnosed failed executions and documented recovery steps.

CLIENT PROJECTS (FREELANCE, PRIVATE WORK)

Freelance AI Automation & Integration Engineer, EZUmrah (Malaysia) 2026

- Designed and built an AI-integrated command center to coordinate operations for an Umrah travel business through one connected system.
- Connected six workflows through shared orchestration, including API-dependent steps, and handled integration and testing.

Freelance AI Automation Engineer, PT Geget Gigit (Indonesia) 2026

- Built an AI-integrated system to coordinate marketing workflows, with the company's frontend connected to the AI-assisted workflows.
- Implemented workflow orchestration and integration; tested and iterated on the system.

PUBLIC ENGINEERING PROJECTS

Reference implementations built to be tested; not customer deployments.

VAREVANT Workflow Engineering | n8n, JavaScript
Historical n8n export (117 nodes, 60 Code nodes) for lead intake and outreach: routing, suppression, state checks, and recovery evidence.
github.com/naraya07pedro-spec/varevant.com/tree/main/n8n

Production Integration Reference | TypeScript, PostgreSQL
Built webhook intake that verifies signatures, gives each event a durable ID, blocks duplicate processing, and retries failures a bounded number of times. Includes failure-path tests.
github.com/naraya07pedro-spec/production-integration-reference

Bounded Agent Runtime | Python/FastAPI, PostgreSQL
Stored approvals in PostgreSQL and added controlled recovery for AI actions with uncertain outcomes. Archived v2: 261 tests, 90.01% coverage.
github.com/naraya07pedro-spec/agent-runtime-python

Knowledge Workflow Runtime | FastAPI, pgvector, MCP
Document processing, cited retrieval, and review states. Historical: 134 tests, 91.64% coverage; 12/12 synthetic evals.
github.com/naraya07pedro-spec/varevant.com/tree/main/examples/agentic-systems-lab/knowledge-runtime
