

EVAN NARAYA HOKKY PRADYGTA

Backend & Integration Engineer

Python/FastAPI | PostgreSQL/pgvector | APIs | MCP | Reliable Systems
Magelang, Indonesia (UTC+7) | evannarayahp@gmail.com | LinkedIn | GitHub

PROFILE

Backend and integration engineer focused on Python/FastAPI, PostgreSQL-backed state and APIs. Hands-on with async logic, authorization, idempotency, reconciliation, lifecycle-aware retrieval, native MCP, document processing and failure recovery. Public source and behavioral tests support the engineering claims.

CORE STACK

Python | FastAPI | Pydantic | PostgreSQL/pgvector | REST APIs | TypeScript | MCP | Docker | GitHub CI | n8n

PROFESSIONAL EXPERIENCE

AI Automation & Integration Engineer | VAREVANT | 2026-Present | Remote, Indonesia

- Build backend and integration systems across Python/FastAPI, TypeScript/JavaScript, PostgreSQL/Supabase, REST APIs, webhooks, and n8n orchestration.
- Design explicit workflow state and side-effect boundaries using durable identity, validation, claim/verify controls, retries, approval points, and recovery paths for uncertain or partial outcomes.
- Operate and debug API-connected workflows and VPS-hosted automation, tracing contract mismatches, stale state, configuration dependencies, race conditions, and persistence gaps.
- Write regression tests, CI checks, implementation notes, and handoff documentation so repaired behavior remains inspectable and repeatable.

SELECTED ENGINEERING PROOF

Bounded Agent Runtime | Python/FastAPI, PostgreSQL | v2: 261 tests, 90.01% coverage

Stateful runtime with tenant authorization, worker fencing, persistent approvals, bounded reconciliation, crash recovery, observability, deterministic evals, and failure-injection tests.

Knowledge Workflow Runtime | FastAPI, pgvector, MCP, OCR | 134 tests

Atomic source update/delete, filtered retrieval, reranking and source citations; native MCP, independent approval, PDF/image/DOCX extraction, local OCR, review states and durable handoffs. 91.64% statement/branch coverage; 12/12 evals. Synthetic reference; lexical/extractive default.

Production Integration Reference | TypeScript, PostgreSQL, REST/Webhooks

Runnable reference for raw-byte HMAC, durable event identity, atomic SQL reservation, stable idempotency keys, classified retries, contention tests, and partial-failure handling.

VAREVANT Workflow Engineering | n8n, JavaScript, APIs | historical 117 nodes | 60 Code nodes

Historical n8n system plus incident/recovery evidence covering routing, suppression, live re-checks, failure contracts, worker context, and explicit no-send/uncertain-send paths.

SELECTED CLIENT WORK

PT Geget Gigit (Indonesia) - AI Automation Engineer

AI-powered CMO automation for recurring marketing operations. Private implementation; no public outcome metrics claimed.

EZUmrah (Malaysia) - AI Automation & Integration Engineer

Six-workflow automation and integration system plus shared orchestration. Private implementation; no public outcome metrics claimed.
